

- Read Section 3 handouts
- Install Virtual box on your PC
- Create your first new VM (The specification is below)
- Download and Install Linux CentOS on your virtual box (PLEASE NOTE: During installation you will get the option to turn Ethernet ON or OFF. Please keep the Ethernet OFF for your installation)
- I would highly recommend that you install Linux OS the first time and then delete it. Then install the 2nd time and keep it. This will be a good practice for the OS installation
- After the installation familiarize yourself with GNOME desktop environment. Most likely you will not be working a lot on the GUI but I would still recommend to know a few features of desktop GUI

Specification for Linux VM is as follow:

- Memory = 2G
- Disk Space = 10G
- CPU = 1
